

Mathematics
Chalk-and-board practice – rules of evaluation

I. Principles of the system

- There are three components of evaluation expressed in points: colloquium, short test, and personal activity;
- Tests scheduled during each semester include: **one** colloquium, **nine** short tests, and before each term of an exam - **one** supplementary colloquium;
- The maximal attainable number of points is **20.0**; in order to accomplish the course, the minimal required number of points is **10.0**
- The total number of points (TNP) is calculated as a sum of the following components:

colloquium	8.0
short tests	9.0 (1test = 1pt.)
personal activity	3.0
Σ	20.0

- In case, when the collected TNP is less than 10.0, it is required to write the supplementary colloquium.
- The supplementary colloquium consists of five calculation problems of the total value of **6.0**; the required minimum to pass that test is equal to **3.0**
- The supplementary colloquium makes it possible to increase the TNP for those who have already fulfilled the minimum TNP, but only before the first term of the exam. In that case however, the threshold is set at the level of **3.0** points. That means, it is possible to increase the TNP by 3 points maximum (e.g. obtaining in the supplementary colloquium 4.5 points increases the TNP by 1.5 points)
- The table below assigns the TNP to the corresponding legal grades:

TNP	Grade
18.5 – 20.0	(5) ‘bardzo dobry’
16.5 – 18.0	(4.5) ‘dobry plus’
14.5 – 16.0	(4) ‘dobry’
12.5 – 14.0	(3.5) ‘dostateczny plus’
10.0 – 12.0	(3) ‘dostateczny’

II. Evaluation of a single calculation problem

There are five criteria to fulfill, when evaluating any single calculation problem:

- Understanding of the problem contents; evaluation for that criterion is ‘yes’ or ‘no’. In case of ‘no’ the general grade for that calculation problem is **zero**.
- Correctly used formulas;
- Correctly used data;
- Correctly made calculations (final result);
- Additional informations (comments, figures, applications)

III. According to the study regulations: A student shall participate in educational classes included in the study schedule and take an active part in them.

A student's attendance at lectures may be controlled. At other classes the attendance is obligatory.

A student is obliged to explain his absence at obligatory classes no later than at the next classes. The tutor determines a way and date of making up the backlog. The tutor shall inform the Dean about unexplained absence (three absences in case of weekly classes, two absences in case of fortnight classes) of a student at obligatory classes and the Dean shall take a stand on the matter.

The Studies Regulations and Academic Year Calendar you can find on the Website:
